C-137 CHAIN AND CABLE (AEROSOL)

01/01/18

DESCRIPTION

C-137 Chain and Cable Lubricant provides a thick foam that clings to vertical surfaces. As the foam breaks, C-137 Chain and Cable Lubricant penetrates into wire rope and roller chain mechanisms, deposits a molybdenum disulfide-based grease and provides surfaces with superior lubricating properties. It also protects against high temperature and extreme pressure environments. C-137 Chain and Cable Lubricant will not break down, fly off or wash away with water or steam. It retains its lubricating properties under heavy shock loads, acidic environments, salt spray and also prevents surface oxidation and corrosion. Its super high tack formula provides active lubricant dispersion while equipment is in operation.

QUALITIES & BENEFITS

Penetrating lubricant that puts a moly grease deep inside cable where greatest stress occurs.

Reduces friction and wear in moving parts and in metal on metal applications.

Moly additive provides extreme temperature and pressure resistance.

Will not breakdown when exposed to high humidity, salt spray, chemical vapors, or water.

High pressure and temperature resistance.

APPLICATIONS

C-137 Chain and Cable Lubricant can be used in the following applications:

Chains	Booms	Hoists	Saws
Conveyors	Cables	Wire Ropes	Cranes
Winches	Bearings	Rollers	Tow Lines

SPECIFICATIONS

Net Wt.	15 oz.
Appearance	Dark Green Liquid
Flash Point, °F	40
Aerosol Flammability	Extremely
Specific Gravity	0.769
Propellant	Carbon Dioxide
Spray Pattern	Pin Point/Fan Spray
NFPA-30B	Level 3
