L-641 ReSeal Tire Protection

07/23/2019

L-641 ReSeal Tire Protection industrial strength tire sealant is a cost-effective, non-hazardous and military-grade tire sealant made in the USA. It offers light-weight tire protection for equipment that is exposed to harsh conditions. ReSeal is a perfect fit for many off road tire applications like the following:

- Mining operations
- Agriculture
- Construction
- Military
- All-terrain
- Waste Management
- Ground Support
- Landscaping

L-641 ReSeal Tire Protection is the only tire sealant on the market that contains Dupont™ Kevlar® fibers. Kevlar® is 5x stronger than steel and is used in bullet proof vests among other things. When the tire is punctured, thousands of fibers fill in around the whole to prevent air pressure loss.

L-641 ReSeal Tire Protection offers superior puncture protection and keeps your equipment running in the harshest of environments. ReSeal has been tested to be effective on punctures and holes up to 1/2". This coverage is better than the industry standard of 3/8

L-641 ReSeal Tire Protection also leads the industry in rust protections. It contains rust and oxidation inhibitors as well as a pH buffer. These additives combine to prevent rust and algae, making for easy dismounting and replacement.

Product Details

Apperance	Green liquid
Specific Gravity	1.01
Freezing Point	N/A
Boiling Range	212°F/100°C
Odor	Mild
Flash Point	201°F/99°C
Flammability	N/A
